

Glass

GLASS has been the fundamental product behind McLeod Glaziers since 1836, and continues to dominate our product range to this day. Apart from being cut, glass can be polished, beveled, drilled and toughened for any application using cutting edge, high tech machinery housed within our head office at Inveralmond. Glass also comes in countless patterns, tints and thickness. All our products can be supplied or installed by a highly trained glazing team working to Glass and Glazing Federation standards. Every glazing related enquiry is treated quickly and efficiently by our friendly staff, on or off site.
