

Hybrid Window Systems

The Hybrid window system is the newest product to McLeods extensive range. The system itself is a composite product made up of internal timber giving superb aesthetics and a feeling of warmth but with an external of clad aluminium for strength and durability. The system is designed specifically for the UK market where it out performs other similar systems from the continent with regards to U values and lead times. The system is a must for all architects, surveyors, local authorities and all construction based companies.

The system is ideal for the domestic, commercial and industrial sectors due to the systems extensive range of styles. The system has a flush fitting and standard casement, tilt and turn, overswing and fixed light. The system has now been updated to incorporate an internally and externally opening door section and soon to be launched will be an in line patio and bi folding doors. The external aluminium clad can come in a one of 200 colours to meet requirements with the internal timber being factory finished the system requires no further improvement once installed.

The further impressive selling point of the system is the curtain walling section which is made in the same manner as the window and doors systems. Tested to the latest criteria the curtain wall section out performs many other systems in the marketplace. The system is unique in the way it is fabricated where the lead times are the same as the window section coming in around 4-5 weeks from the date of order.

To learn more about the Hybrid system please visit the Hybrid site or download our brochure or contact one of the McLeods staff where we can discuss your requirement in further details and show you a sample Hybrid window in our showroom and even show the window being manufactured in real time.
